

An aerial photograph showing a complex highway interchange with multiple overpasses and ramps. A river flows through the center of the interchange, and a large section of the river is flooded, with water reaching the highway's edge. A bridge with a green steel truss structure spans the river in the lower portion of the image. The surrounding landscape is a mix of dry, brownish hills and some evergreen trees.

Upper Yakima River Comprehensive Flood Hazard Management Plan RM 107-128 June 2007 Update
