TUBERCULOSIS (TB) CONTROL: USING MODERN TECHNOLOGY  
TO BATTLE AN ANCIENT PROBLEM

**David Miller RN, BSN**

# What is Tuberculosis? (TB)

---

- A disease that can infect any part of the body, but the lungs are most commonly infected
- Caused by a bacteria, usually mycobacterium tuberculosis
- Primarily transmitted from person to person through the air
- Usually remains in a latent state for years before becoming active

# WHY WORRY ABOUT TB?

---

## HISTORY OF TB

- Ancient illness described by Hippocrates as "phthisis" (to waste away), most common illness of his time (460 BCE) and almost always fatal according to his writings
- Clinical features found in Egyptian mummies thousands of years old
- In the 19th century TB was the #1 killer in Europe and America called "consumption" commonly at that time
- In 1851, 1 in 4 people are killed by TB in Europe and America

# WHY WORRY ABOUT TB?

---

## Global TB

- 10 Million people became ill with TB in 2017
- 1.6 Million people died from TB in 2017, more than HIV/AIDS
- 230,000 children died from TB in 2017
- 558,000 cases of TB had resistance to rifampin (82% MDR)

## U.S. TB

- 9,021 people became ill from TB in 2017
- 526 people died from TB in 2016
- Approximately 2% of TB cases are multi-drug resistant

# WHY WORRY ABOUT TB?

---

## **TB Mortality - Without Proper Treatment Very High Mortality**

- About 50% of patients will die
- About 17% will survive in a continuously infectious state
- About 33% will spontaneously cure, but are high risk to reactivate

## **Treatment is Difficult**

- 6-9 months of daily, multi-drug treatment
- Many side effects possible, some very serious
- Improper treatment leads to drug resistant TB
- Patient will usually remain contagious until proper treatment administered

# How Do We Control TB?

## DIAGNOSIS AND PROPER TREATMENT

- Clinical Consultation
- Case Management
- Directly Observed Therapy

## CONTACT INVESTIGATIONS

- Finding exposed people
- TB testing and treatment

## EDUCATING MEDICAL PROVIDERS

- Screening for TB
- Diagnosing TB
- Treating TB

FOCUS ON:

# Directly Observed Therapy

---

# Directly Observed Therapy (DOT)

---

- DOT is a standard of care promoted by WHO and CDC since the 1990 to prevent increasing drug resistance
- Medications are taken under the observation of a public health worker
- Prevents treatment failure and drug resistance

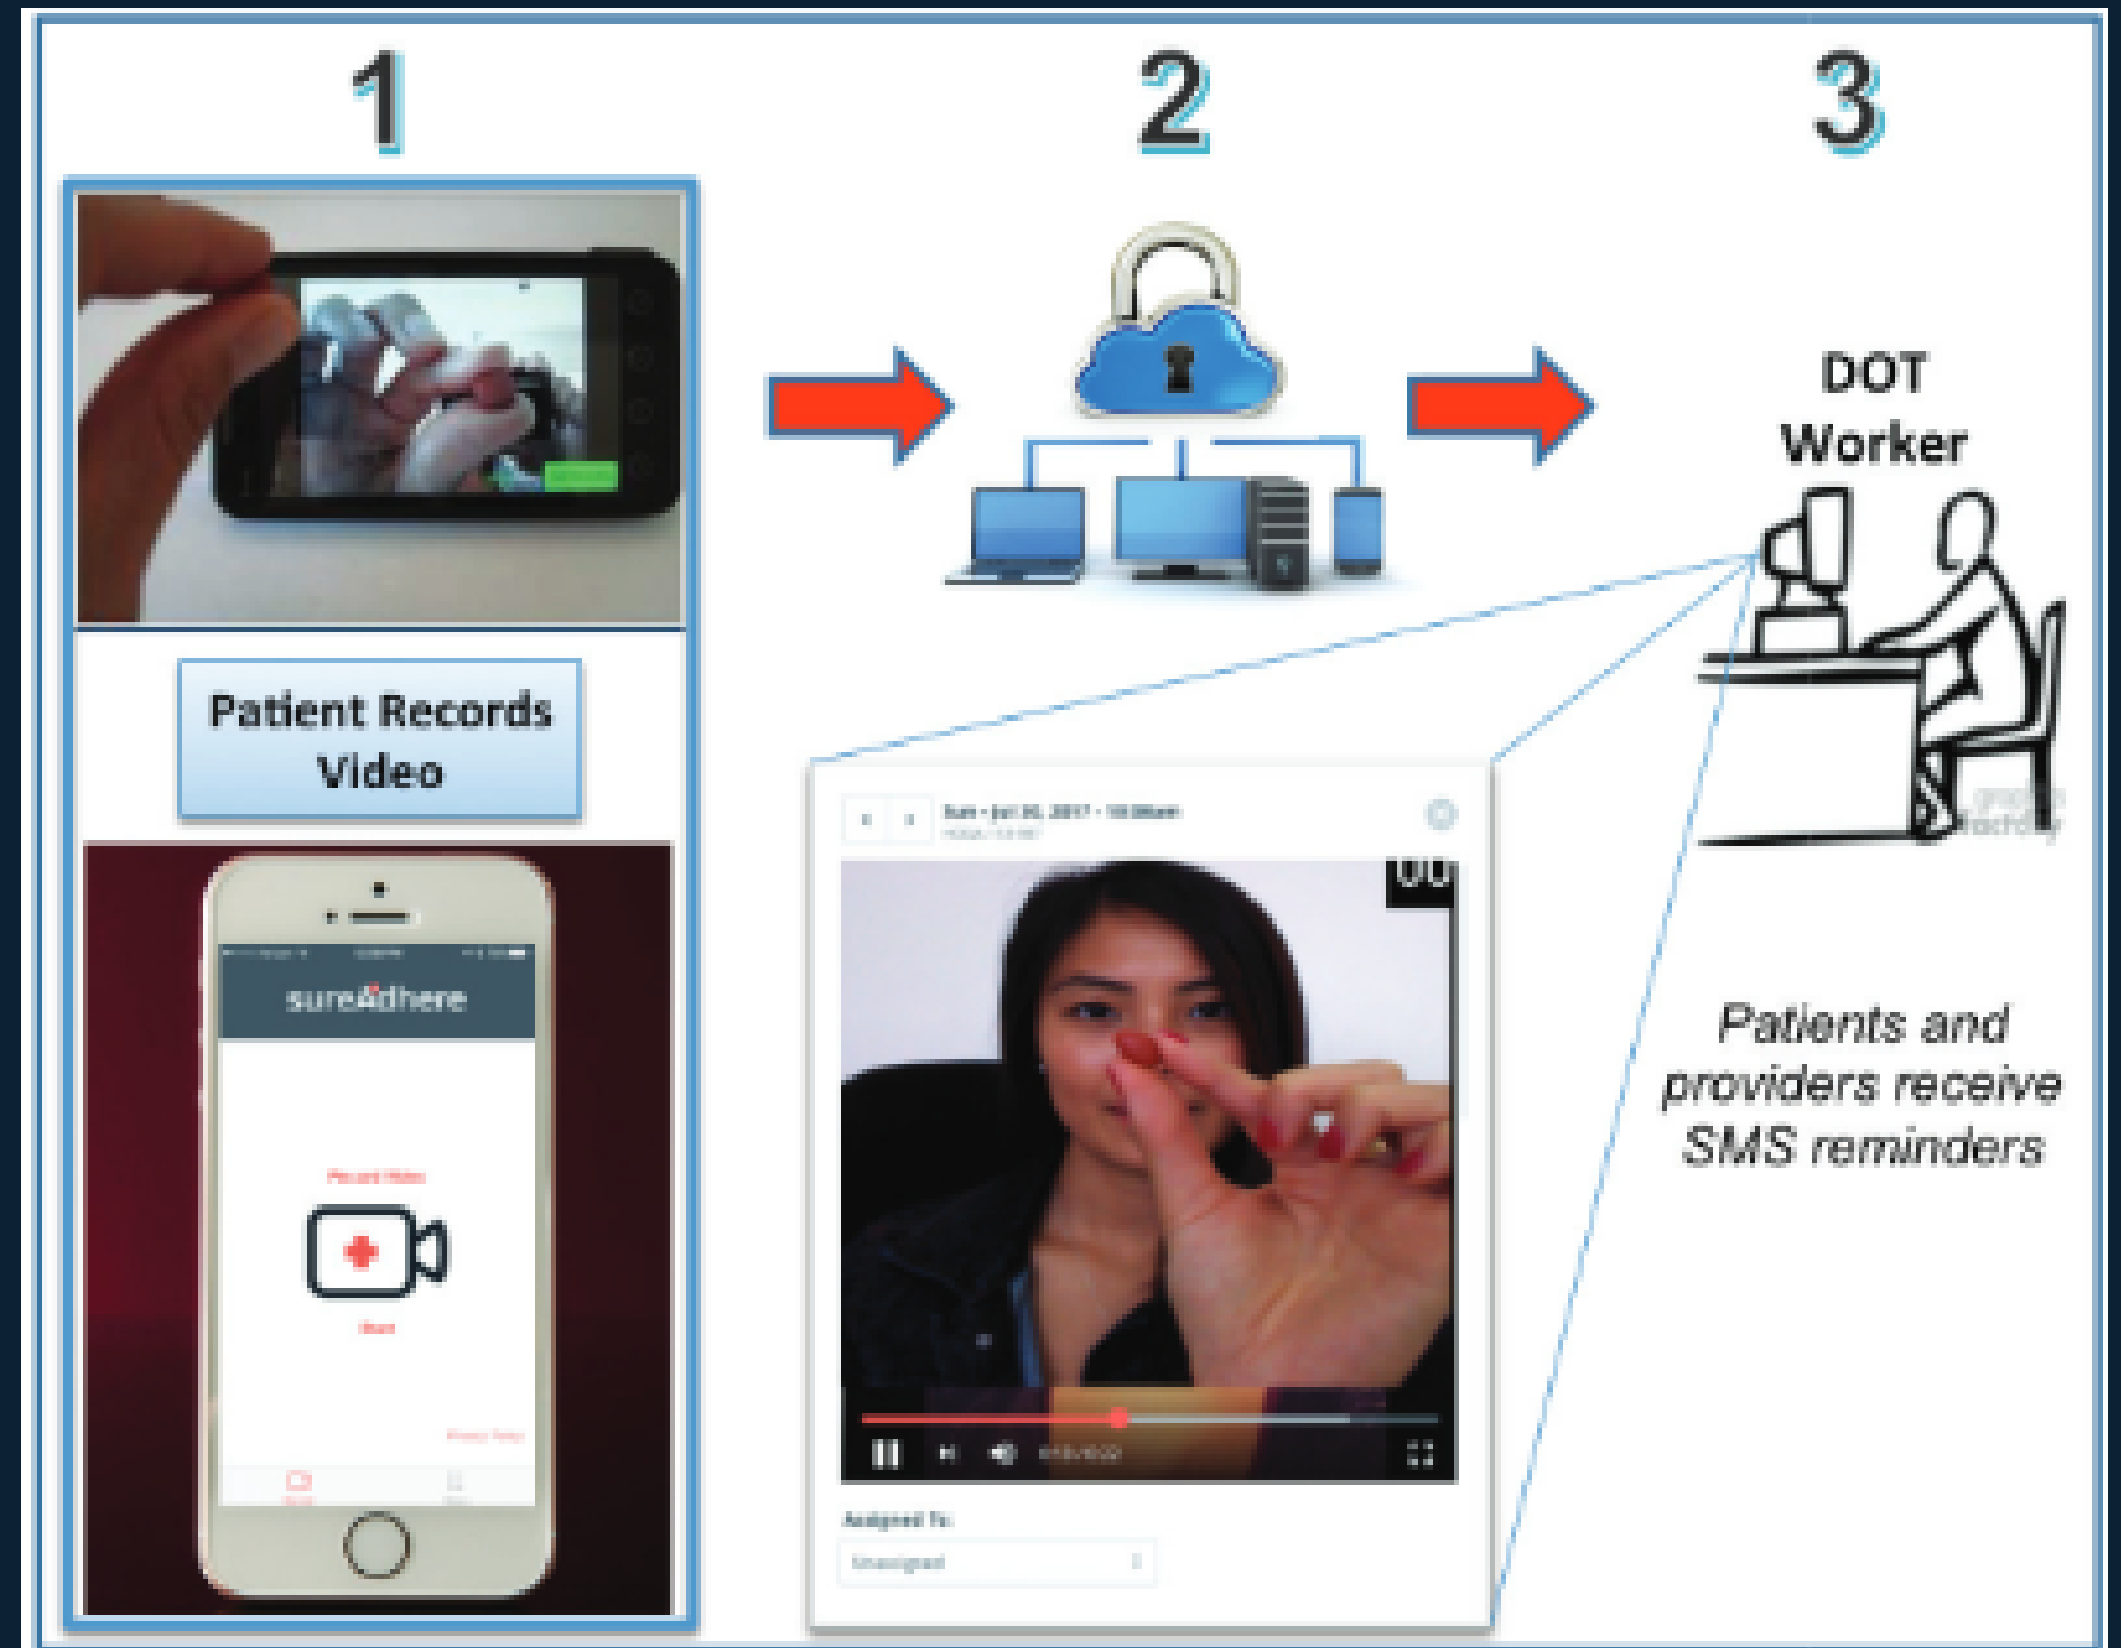

**NEW FOR 2019:**

# **Video DOT**

---

# What is Video DOT? (vDOT)

- Patients use a smartphone app to video record themselves taking the medications
- The video is encrypted, then uploads to a secure server
- Video is automatically deleted from the phone once uploaded (protects privacy)
- The video is viewed by Health District staff via a secure web portal

# Video DOT

---

## Advantages

- By making DOT more convenient for patients, the TB Control program can be more effective at improving patient adherence
- Much more efficient - enables staff to provide mandated TB control in less time and at lower cost
- Staff and patients do not have to drive in inclement weather as often
- Staff do not have to travel as much to potentially dangerous areas

# Video DOT

---

## Challenges Addressed

- Less opportunity to evaluate patients in person
  - *Solution: Face to face DOT for first 2 months, then gradually transition to vDOT*
- Small chance patient does not report side effects in a timely manner
  - *Solution: Thorough education upfront and during use of vDOT*
- Smart phone and internet access necessary
  - *Solution: Provide smart phone with internet access to patient temporarily while on vDOT*
- System must be HIPAA compliant, common video chat apps not recommended
  - *Solution: Use of SureAdhere system*

# Cost Savings of vDOT

---

## 2018 Cost - Traditional DOT

- DOT for one TB case in Tieton for six months = ~\$19,000
- DOT for one TB case in Toppenish area for six months = ~ \$14,000

## 2018 Cost - vDOT

- vDOT for one TB case in Tieton for six months = ~\$3,600 (~\$15,600 saved)
- vDOT for one TB case in Toppenish area for six months = ~ \$3,300 (~\$10,900 saved)

# YHD Strategic Goals

STRENGTHEN  
MANDATED  
SERVICES

INCREASE  
COMMUNITY  
PARTNERSHIPS

IMPROVE  
EFFICIENCY &  
EFFECTIVENESS
