Public Services Department  
Planning Division**

## **Yakima County's 2025 Review of its UGAs and Permitted Densities (as required by the Growth Management Act)**

# Urban Growth Area for City of Moxee

## Staff Report

### October 22, 2025

Staff contact: Olivia Story, Long Range Planning Manager  
[Olivia.story@co.yakima.wa.us](mailto:Olivia.story@co.yakima.wa.us) (509) 574-2300

## Introduction

The Growth Management Act (GMA) provides:

*“(a) Each county that designates urban growth areas under RCW 36.70A.110 shall review, according to the schedules\* established in [RCW 36.70A.130(5)(c)], its designated urban growth area or areas, patterns of development occurring within the urban growth area or areas, and the densities permitted within both the incorporated and unincorporated portions of each urban growth area. In conjunction with this review by the county, each city located within an urban growth area shall review the densities permitted within its boundaries, and the extent to which the urban growth occurring within the county has located within each city and the unincorporated portions of the urban growth areas.*

*“(b) The county comprehensive plan designating urban growth areas, and the densities permitted in the urban growth areas by the comprehensive plans of the county and each city located within the urban growth areas, shall be revised to accommodate the urban growth projected to occur in the county for the succeeding 20-year period ...”*

[RCW 36.70A.130(3)]

\*The GMA requires Yakima County and its cities to complete the UGA reviews and revisions by December 31, 2026.

This report is part of Yakima County's efforts to meet its obligations under the RCWs cited above. It constitutes a recommendation to the County Planning Commission as well as the County's initial "show-your-work" exhibit as required by the GMA. A draft was shared with the City of Moxee to improve accuracy and foster a collaborative approach, and to assist Moxee in meeting its responsibilities under these RCWs.

1      **Review of Urban Growth Area (UGA): Land Capacity Analysis (LCA)**

2  
3      A Land Capacity Analysis is an essential component in reviewing a UGA. An LCA is a quantitative  
4      estimate of how much land a city will require as it grows over the succeeding 20-year period. It  
5      begins with consultation between a county and its cities and towns to select a population growth  
6      projection from a range of population growth projections provided by the state Office of Financial  
7      Management (OFM). The population projection, together with a county employment growth forecast,  
8      is then allocated primarily to UGAs, to assist in sizing UGAs to accommodate future urban growth.  
9

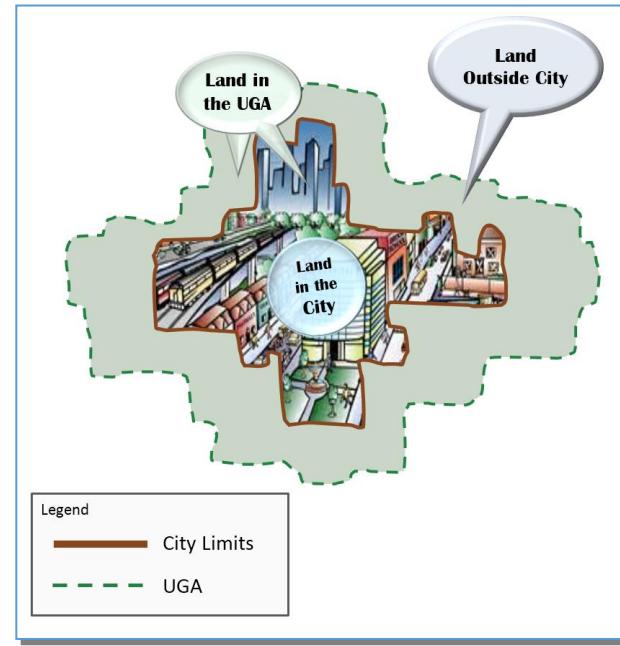

10     After reviewing OFM's most recent population projections for Yakima County, the Yakima County  
11    Planning Division prepared a draft report entitled *Yakima County – Draft 2046 Population  
12    Projections and Allocations* that allocated the projected population growth among the county's 14  
13    cities.

14  
15    The Planning Division shared the report with the County's cities on April 15, 2024, and met with  
16    each city during the subsequent summer to review the report and get their comments on the draft  
17    allocations.

18  
19    Finally, staff reviewed all received comments and  
20    issued a final report on April 8, 2025. This LCA  
21    report reflects those final population allocations.

22  
23    Three terms will be used throughout this analysis.  
24    They will be used to describe potential growth as  
25    follows:

- 26      1) **Land in city:** This is used to describe  
27      lands within the city limit.
- 28      2) **Land outside city:** This is used to  
29      describe the land in the UGA over which  
30      the county has jurisdiction.
- 31      3) **Land in UGA:** This term refers to the  
32      city's current area plus the areas the city  
33      plans to annex and develop over a 20-year  
34      period. The analysis combines terms 1  
35      and 2 to determine its size.

36  
37    The LCA quantifies the amount of land needed for Moxee's growth according to the analytical  
38    process outlined in the "Urban Lands" section in the Land Use Element of Yakima County's  
39    Comprehensive Plan (***Horizon 2046***). The general inputs and calculations<sup>1</sup> are outlined below:  
40

41      **Calculation of Net Acreage Available in the UGA for Future Growth:**

42  
43      Acres needed for future residential  
44      (plus) Acres needed for future commercial  
45      (plus) Acres needed for future community facilities  
46      (plus) Acres needed for future Streets

47  
48      <sup>1</sup> The spreadsheet in Attachment 1 provides expanded descriptions for assumptions and calculations. This section is explanatory  
49      and provides a synopsis of the methods and inputs used for UGA and LCA analysis.

1 (plus) Acres needed for future industrial  
2 **Subtotal:** the total acreage needed for UGA Growth

3 Acres of currently vacant residentially zoned land  
4 (plus) Acres of currently vacant commercially zoned land  
5 (plus) Acres of currently vacant community facilities land  
6 (plus) Acres of currently vacant industrially zoned land  
7 **Subtotal:** the vacant acreage available for growth within the current UGA

8  
9 **Subtotal:** total acreage needed for UGA growth  
10 (minus) **Subtotal:** the vacant acreage available for growth within the current UGA

11 **Total:** Net Acreage Available in the UGA for Future Growth.

### 12 **Quantity of land calculations for non-industrial uses**

13 Yakima County's Division of Geographic Information Services (GIS) calculated the current acreage  
14 of developed residential, commercial, retail, and community facilities; and the acreage of current  
15 vacant and partially vacant land in each zoning district to generate the figures in the "UGA Land  
16 Capacity Analysis" spreadsheet (Attachment 1)

17 In summary, this analysis finds that Moxee's UGA has enough vacant lands to accommodate its  
18 non-industrial growth for 38 years. It has a surplus of 275 residentially zoned vacant acres, a deficit  
19 of 2 commercially zoned vacant acres, and a deficit of 35 vacant acres owned by providers of  
20 community facilities to accommodate projected growth through 2046, as explained below:

21

22 1. **Population and Households Analysis:** Based on Moxee's projected 2024-2046 population  
23 growth, this analysis estimates that 1,111 additional households will be added to the city's  
24 population by the year 2046.

2046 population forecast for City (City/County consensus)		People 9,076
2024 population in City (OFM's April 1 estimate)		People 4,820
Population change: 2024 – 2046		People 4,256
Average household size in City: 2020 <sup>2</sup>		People 3.83
<b>Future Households in the City 2024 – 2046</b>		<b>1,111 households</b>

23

24 2. **Future Residential Land Need:** The acreage needed for future residential growth through  
25 2046 was calculated by assuming an average future density of 5.1 dwelling units per acre  
26 (i.e., 8,500 sq. ft. for each household) and multiplying this by the number of projected future  
27 households:

28

<b>(8,500 sq. ft. x 1,111 households) ÷ 43,560 sq. ft. per acre =</b>	<b>217 acres</b>
-----------------------------------------------------------------------	------------------

29

30 3. **Future Commercial & Retail Land Need:** The acreage needed for future commercial and  
31 retail growth through 2046 was calculated by multiplying the projected population increase  
32 by the current per person acreage of developed commercial lands within the city.

33  
34  
35  
36  
37  
38  
39  
40  
41  
<sup>2</sup> Taken from Table S1101 – 5-Year American Community Survey

4,256 people x .0046 acres per person =	<u>20 acres</u>
-----------------------------------------	-----------------

1  
2   4. **Future Community Facilities Land Need:** The acreage needed for future community  
3   facilities growth through 2046 was calculated by multiplying the projected population  
4   increase by the current per person acreage of developed community facilities land within the  
5   city:

4,256 people x .0106 acres per person =	<u>45 acres</u>
-----------------------------------------	-----------------

7  
8   5. **Future Streets Land Need:** The acreage needed for future rights-of-way to accommodate  
9   streets and utilities through 2046 was calculated by multiplying the acreage needed for future  
10   residential, commercial and retail, and community facilities by 15%:

Residential acreage needed	217 acres
(plus) Commercial/retail acreage needed	20 acres
(plus) Community facilities acreage needed	45 acres
<b>Subtotal</b>	282 acres
<b>Equals: Total streets acreage needed (Subtotal x .15)</b>	<b><u>42 acres</u></b>

12  
13   6. **Land Capacity Analysis (LCA)**<sup>3</sup>

14  
15   For this analysis we compare the identified land needs to the amount of existing vacant land to  
16   determine whether the city and the unincorporated UGA have sufficient capacity to  
17   accommodate projected growth through 2046 or whether a land deficit remains.

18  
19   The current acreage of vacant non-industrially zoned land is compared to the calculated needs for  
20   future non-industrial land uses.

21   a) **Residentially zoned capacity calculation:**

Currently vacant residentially zoned land in the city	224 acres
(minus) needed residential acreage, including associated streets	-250 acres
<b>Subtotal: Deficit of vacant residentially zoned land within city</b>	<b><u>-26 acres</u></b>
(plus) current vacant residentially zoned land outside the city	301 acres
<b>Equals: Surplus of vacant residentially zoned land in the UGA</b>	<b><u>275 acres</u></b>

23   b) **Commercially zoned capacity calculation:**

Currently vacant commercial and retail zoned land in city	6 acres
(minus) needed commercial and retail acreage, including associated streets	-23 acres
<b>Subtotal: Deficit of vacant commercially zoned land in city</b>	<b><u>-17 acres</u></b>
(plus) Surplus current vacant commercially zoned land outside the city	15 acres
<b>Equals: Deficit of vacant commercially zoned land in the UGA</b>	<b><u>-2 acres</u></b>

25   c) **Community facilities capacity calculation:**

Current vacant community facilities land in city	17 acres
--------------------------------------------------	----------

<sup>3</sup> The spreadsheet in Attachment 1 provides the LCA steps and expanded descriptions for assumptions and calculations.

(minus) need community facility acreage, including associated streets	-52 acres
<b>Subtotal: Deficit of vacant community facilities in City</b>	<b>-35 acres</b>
(plus) Currently vacant community facilities land outside of the city	0 acres
<b>Equals: Deficit of vacant community facilities land in UGA</b>	<b>-35 acres</b>

1                   **d) Net capacity of non-industrially zoned UGA calculation (total of a-c above):**

Surplus of vacant residentially zoned land	275 acres
(plus) Surplus of vacant commercially zoned land	-2 acres
(plus) Deficit of land needed for future community facilities	-35 acres
<b>Equals: Surplus of vacant land in non-industrially zoned UGA</b>	<b>238 acres</b>

3                   **e) Years of growth in city (excluding industrial growth)**

Deficit of vacant land for residential, commercial, community facilities, and streets	-78 acres
<b>Equals: Years of growth available in City in 2024</b>	<b>17 years</b>

5                   **f) Years of growth outside city (excluding industrial growth)**

<b>Equals: Years of growth available outside City in 2024</b>	<b>21 years</b>
---------------------------------------------------------------	-----------------

7                   **g) Years of growth in UGA (excluding industrial growth)**

Surplus of vacant land for residential, commercial, community facilities, & streets within UGA	238 acres
(computed) Market Choice Factor in UGA (MCF) <sup>4</sup>	73 percent
<b>Equals: Years of growth available in UGA in 2024</b>	<b>38 years</b>

9                   **Years of growth for non-industrially zoned UGA calculation**

10                  To determine the years of growth available in the UGA for non-industrial zoned land, we first express the surplus (or deficit) of non-industrially zoned land MCF as a percentage. For example, as shown below, if a city has 125 vacant acres but only needs 100 acres for future growth, it has 25% more vacant land than required. This number 25% is the Market Choice Factor.

11                  
$$[(\text{acres currently vacant}) \div (\text{acres needed for future growth})] - 1.00 = \text{MCF\%}$$
  
 12                  Inserting Moxee's numbers (from the table below) in the formula provides the  
 13                  following percentage for Moxee's MCF:

14                  
$$(563 \div 325) - 1 = 73\%$$

15                  The MCF% is then utilized in the final calculations to result in the years of growth available in  
 16                  the UGA (see below). The County's 2046 UGA Update calculated the amount of vacant land  
 17                  needed for the next 22 years of growth as Yakima County's land capacity analysis spans 2024  
 18                  to 2046 (RCW 36.70A.130(b)).

4 MCF Use and Calculations Summary are found below under Conclusion of Above Tables

1  
2      **MCF in Years = (73% + 1) x 22 = 38 years of growth**  
3  
4  
5  
6

$$\text{MCF in Years} = (73\% + 1) \times 22 = 38 \text{ years of growth}$$

7      **Total amount of vacant land needed in UGA for Future Non-industrial Uses.** Adding the  
8      needed acres from the categories above calculates the total acreage below.  
9  
10

Acres needed for future residential uses (and associated streets)	250 acres
(plus) Acres needed for future commercial & retail uses (and associated streets)	23 acres
(plus) Acres needed for future community facilities (and associated streets)	52 acres
<b>Equals: Total vacant acres needed for future non-industrial growth</b>	<b>325 acres</b>
<u>Total amount of currently vacant Non-Industrially Zoned Land in UGA:</u> (vacant residential + vacant commercial/retail uses + vacant community)	563 acres

11      **7. Future industrial land needs:**  
12  
13  
14

15      As outlined in the "Urban Lands" section of the Land Use Element, the city determines the  
16      amount of land needed for future industrial use "based on its economic development strategy  
17      rather than future population projections." The County's GIS analysis provides current acreages  
18      of industrially zoned lands:  
19  
20

Currently developed industrially zoned land in city	214 acres
Currently developed industrially zoned land outside city	0 acres
Currently vacant industrially zoned land in city	489 acres
Currently vacant industrially zoned land outside city	0 acres
Additionally vacant industrially zoned land need in city	0 acres
Additionally vacant industrially zoned land need outside city	0 acres

21      **Review of Patterns of Development and Densities Permitted in the UGA**  
22  
23  
24  
25  
26

27      In addition to reviewing Moxee's UGA as shown above, Yakima County must also review the  
28      densities permitted within both the incorporated and unincorporated portions of the UGA, and the  
29      patterns of development occurring within the UGA, as required by RCW 36.70A.130(3)(a).  
30  
31

32      The City of Moxee includes 8 zoning districts within its limits: R-1 (Single-family, manufactured or  
33      modular home on a single lot), R-2 (Single-family and two-family), R-3 (Multifamily), RR (Rural  
34      residential), C-1 (Central business district), C-2 (General commercial), I (Light industrial/  
35      manufacturing), and P (Public).  
36  
37

38      The densities permitted in the residential zones are analyzed below. The residential zoning districts  
39      and their allowed densities are:  
40  
41

City of Moxee Zoning (Title 16 Land Use and Development)		
Zoning District	Minimum Lot Size	Density
R-1 (Single-family, manufactured or modular home on a single lot)	7,000 sq ft	6 dwelling units (du)/acre
R-2 (Single-family and two-family)	5,000 sq ft to 7,000 sq ft	7.26 to 12 du/acre

R-3 (Multifamily)	4,000 sq ft to 7,000 sq ft	7.26 to 20 du/acre
RR (Rural residential)	21,780 sq ft to 7,000 sq ft	2 to 6 du/acre
<b>Yakima County Zoning in the Urban Growth Area (Yakima County Code Title 19)</b>		
<b>Zoning District</b>	<b>Minimum Lot Size</b>	<b>Density</b>
R-1 (Single Family Residential)	4,000 – 10,000 sq. ft. (depending on use) 7,000 sq. ft. for single-family residence	7 units per acre

1

2 **Conclusions of the Above Tables**

3

4 Within its city limits, Moxee currently has 225 acres of vacant residential-zoned land. If developed  
5 with single-family homes on 7,000 square foot lots within city limits, the area could accommodate  
6 1,394 new homes.

7 Outside city limits, Moxee's UGA contains 301 vacant acres. All residential land in the UGA falls  
8 under the County R-1 zone, which allows a maximum density of seven units per acre. If built to  
9 capacity at an 8,500 square foot lot/5.1 du density, the UGA could support 1,535 new homes.

10

11 **City/County Collaboration**

12

13 County staff met with City of Moxee representatives on June 11, 2024, and again on January 16,  
14 2025, to collaboratively review the population projections and Yakima County's Land Capacity  
15 Analysis for the Moxee Urban Growth Area. During these meetings, staff reviewed parcel-level GIS  
16 data, discussed the City's recent residential growth trends, and evaluated permitted densities under  
17 the County's R-1 zoning. The conversations focused on verifying the accuracy of identified vacant  
18 and partially vacant parcels, confirming infrastructure availability for future development, and  
19 comparing land supply with the projected housing need through 2046. City staff expressed support  
20 for the County's approach and emphasized the importance of maintaining a mix of housing types,  
21 while also ensuring future development aligns with Moxee's housing plans. These meetings provided  
22 essential local insight and ensured that the land capacity assumptions used in the analysis reflect the  
23 City's current conditions and future growth objectives.

24

25 **Major Rezone and Plan Amendment Review Criteria**

26

27 County staff have had, and will continue to have, collaborative discussions with the City of Moxee  
28 regarding any potential changes to future land use designations or zoning within Moxee's  
29 unincorporated UGA. Should any rezones be proposed, the criteria outlined in this section would  
30 need to be carefully evaluated as part of that ongoing coordination.

31

32 Amendments to the zoning map that are contingent upon legislative approval of a comprehensive  
33 plan amendment are deemed to be legislative and shall be considered major rezones that are subject  
34 to the procedures outlined in YCC Chapter [16B.10](#).

35

36 *(1) The following criteria shall be considered in any review and approval of amendments to Yakima  
37 County Comprehensive Plan Policy Plan Maps:*

38

39 *(a) The proposed amendment is consistent with the Growth Management Act and  
40 requirements, the Yakima County Comprehensive Plan, the Yakima Urban Area  
41 Comprehensive Plan and applicable sub-area plans, applicable city comprehensive  
42 plans, applicable capital facilities plans and official population growth forecasts and  
43 allocations;*

- (b) The site is more consistent with the criteria for the proposed map designation than it is with the criteria for the existing map designation;
- (c) The map amendment or site is suitable for the proposed designation and there is a lack of appropriately designated alternative sites within the vicinity;
- (d) For a map amendment, substantial evidence or a special study has been furnished that compels a finding that the proposed designation is more consistent with comprehensive plan policies than the current designation;
- (e) To change a resource designation, the policy plan map amendment must be found to do one of the following:
  - (i) Respond to a substantial change in conditions beyond the property owner's control applicable to the area within which the subject property lies; or
  - (ii) Better implement applicable comprehensive plan policies than the current map designation; or
  - (iii) Correct an obvious mapping error; or
  - (iv) Address an identified deficiency in the plan. In the case of Resource Lands, the applicable de-designation criteria in the mapping criteria portion of the land use subchapter of Yakima County Comprehensive Plan, Volume 1, Chapter I, shall be followed. If the result of the analysis shows that the applicable de-designation criteria has been met, then it will be considered conclusive evidence that one of the four criteria in paragraph (e) has been met. The de-designation criteria are not intended for and shall not be applicable when resource lands are proposed for re-designation to another Economic Resource land use designation;
- (f) A full range of necessary public facilities and services can be adequately provided in an efficient and timely manner to serve the proposed designation. Such services may include water, sewage, storm drainage, transportation, fire protection and schools;
- (g) The proposed policy plan map amendment will not prematurely cause the need for nor increase the pressure for additional policy plan map amendments in the surrounding area.

Findings: Any zoning map amendments will be processed as a major rezone in accordance with YCC Chapter 16B.10, and all applicable review criteria, including consistency with the Growth Management Act and the Comprehensive Plan, will be fully addressed during the amendment process.

(2) The following criteria shall be considered in any review and approval of changes to Urban Growth Area (UGA) boundaries:

(a) Land Supply:

- (i) The amount of buildable land suitable for residential and local commercial development within the incorporated and the unincorporated portions of the Urban Growth Areas will accommodate the adopted population allocation and density targets;
- (ii) The amount of buildable land suitable for purposes other than residential and local commercial development within the incorporated and the unincorporated portions of the Urban Growth Areas will accommodate the adopted forecasted urban development density targets within the succeeding twenty-year period;
- (iii) The Planning Division will use the definition of buildable land in YCC 16B.02.045, the criteria established in RCW 36.70A.110 and .130 and applicable criteria in the Comprehensive Plan and development regulations;
- (iv) The Urban Growth Area boundary incorporates the amount of land determined to be appropriate by the County to support the population density targets;

(b) Utilities and services:

- (i) The provision of urban services for the Urban Growth Area is prescribed, and funding responsibilities delineated, in conformity with the comprehensive plan, including applicable capital facilities, utilities, and transportation elements, of the municipality;
- (ii) Designated Ag. resource lands, except for mineral resource lands that will be reclaimed for urban uses, may not be included within the UGA unless it is shown that there are no practicable alternatives, and the lands meet the de-designation criteria set forth in the comprehensive plan.

Findings: Any proposal to amend the Urban Growth Area boundary will be reviewed in accordance with YCC Chapter 16B.10 and applicable state and local requirements. All criteria related to land supply, urban service provision, and resource land protections will be addressed to ensure consistency with the Growth Management Act, the County Comprehensive Plan, and supporting capital facility plans. In accordance with Countywide Planning Policy A.3.11, the County and City will identify capital improvement requirements to ensure urban services can be provided within the forecast period. Any expansion of the UGA will also trigger require necessary updates to the Capital Facilities, Utilities, and Transportation Elements of the Comprehensive Plan to demonstrate availability of services to the proposed area.

(3) Land added to or removed from Urban Growth Areas shall be given appropriate policy plan map designation and zoning by Yakima County, consistent with adopted comprehensive plan(s).

Findings: Any land added to or removed from an Urban Growth Area as part of this amendment will be assigned appropriate Comprehensive Plan map designations and zoning consistent with Yakima County's adopted Comprehensive Plan and applicable city plans.

(4) Cumulative impacts of all plan amendments, including those approved since the original adoption of the plan, shall be considered in the evaluation of proposed plan amendments.

Findings: The cumulative impacts of the proposed amendment, along with those of previously approved plan amendments since the original adoption of the Comprehensive Plan, will be evaluated to ensure consistency with countywide planning goals and to avoid adverse impacts on land supply, public services, and infrastructure capacity. The cumulative impacts will be addressed in the Planning Commission's findings.

(5) Plan policy and other text amendments including capital facilities plans must be consistent with the GMA, SMA, CWPP, other comprehensive plan goals and policies, and, where applicable, city comprehensive plans and adopted inter-local agreements.

Findings: This criterion is not applicable. Any modifications to the UGA would be addressed through map amendments rather than through changes to comprehensive plan policies or text.

(6) Prior to forwarding a proposed development regulation text amendment to the Planning Commission for its docketing consideration, the Administrative Official must make a determination that the proposed amendment is consistent with the GMA, CWPP, other comprehensive plan goals and policies, and, where applicable, city comprehensive plans and adopted inter-local agreements.

Findings: This criterion is not applicable. Any modifications to Moxee's Urban Growth Area would be addressed through map amendments rather than through changes to comprehensive plan policies or text.

1  
2 **Conclusion(s)**  
3

4 1. The County's LCA for Moxee calculates a surplus of 275 acres of vacant residentially zoned  
5 land, a deficit of 2 acres of vacant commercially zoned land, and a deficit of 35 acres of vacant  
6 land for community facilities and all associated streets within the current UGA for all non-  
7 industrial uses through 2046. Overall, this is a surplus of 238 acres over what is needed, which  
8 can accommodate Moxee's growth for the next 38 years (from 2024).  
9

10 2. This Land Capacity Analysis finds that Moxee's current city limits would accommodate the  
11 City's growth for 17 years (from 2024) and that the UGA could accommodate the City's growth  
12 for 38 years (from 2024). Because the GMA requires the UGA to accommodate growth for only  
13 22 years (i.e., from 2024 to 2046), the UGA should not be expanded. A reduction is not being  
14 recommended at this time because doing so could further limit future flexibility. This is  
15 particularly important given the prohibition on agricultural land swaps, which already restricts  
16 the ability of smaller, agriculture-constrained jurisdictions to make targeted adjustments when  
17 unique land use challenges arise  
18

19 3. RCW 36.70A.130(3)(c)(ii) prohibits jurisdictions from conducting agricultural land 'swaps'  
20 when there is sufficient capacity to accommodate growth within the existing UGA. While this  
21 regulation is intended to preserve agricultural lands of long-term significance, it creates practical  
22 challenges for smaller jurisdictions that are largely surrounded by agriculture. In such cases, the  
23 prohibition limits flexibility to adjust boundaries, even when targeted swaps could address issues  
24 such as market choice, floodplain constraints, or other land use barriers. Over time, the inability  
25 to consider such adjustments may effectively prevent these jurisdictions from expanding, even  
26 when expansion becomes critical to their economic stability, long-term viability, and the  
27 continuation of orderly growth patterns. As a result, this regulation risks unintentionally  
28 constraining the very growth management outcomes the GMA is intended to enable.  
29

30 **Recommendation(s)**  
31

32 1. County Planning staff recommends no additions or removals to the City of Moxee's UGA at this  
33 time, as staff aims to continue examining and engaging with the City on areas to remove from the  
34 UGA when more time can be spent on public engagement and planning for water, sewers, and  
35 streets.  
36

37 2. County Planning staff recommends no changes to the comprehensive plan designations or zoning  
38 in Moxee's unincorporated UGA.  
39

are either available, or could be provided without excessive public cost. Urban governmental services typically include water and sewer systems, street cleaning services, fire and police protection services, and public transit services. Based on their respective comprehensive, subarea or neighborhood plans, cities and other service providers must be able to demonstrate both ability and willingness to supply designated urban areas with these services within the twenty-year planning period. The Growth Management Act, RCW 58.17

#### 5.8.3.1 Urban Growth Area Designation Process

GMA requires counties to designate Urban Growth Areas (UGA) where development is encouraged and outside which growth can occur only if it is not urban in nature. At a minimum, each city within the County must be included within a UGA. Additionally, a UGA may include land outside of a city but only if it is already characterized by urban growth. Lands not characterized by, or next to, urban growth may be included within a UGA only if the need for it is shown based on projected growth. Perhaps the most important aspect of designating UGA boundaries is the demonstration by cities and towns that they may feasibly serve these lands with urban level services over a twenty-year period.

As required by the GMA, and consistent with desired future settlement patterns, most new housing and jobs will be created within Yakima County's fourteen UGAs. Likewise, most investment in public facilities and services will occur here to ensure the most cost-efficient use and operation of necessary utility systems.

In unincorporated areas within UGA boundaries, **Horizon 2040** establishes several urban land use designations to implement the Growth Management Act's Planning Goal 1: "Encourage development in urban areas where adequate public facilities and services exist or can be provided in an efficient manner." In determining areas to be set aside for future urbanization, the County and cities mutually endorsed a County-Wide Planning Policy. It states that areas designated for urban growth should be determined by preferred development patterns, residential densities, and the capacity and willingness of the community to provide urban governmental services.

UGAs are intended to include land that is characterized by urban growth or will be needed for urbanization, consistent with forecasted population growth and the ability to extend urban services. UGA boundaries are intended to establish the areas within which incorporated cities and towns may grow and annex over the next twenty years. Yakima County's UGAs are also intended to implement Washington Administrative Code, which states that "the physical area within which that jurisdiction's vision of urban development can be realized over the next twenty years." The process for which Urban Growth Areas are designated is outlined below:

- **Population Allocation**

Development of population projections for the Growth Management Act (GMA) is a shared responsibility. As directed by state statute, the Washington State Office of Financial Management (OFM) prepares a reasonable range of possible population growth for Washington counties participating in GMA. Yakima County, also by law, is responsible for selecting a 20-year GMA planning target from within the range of high and low

prepared by OFM. The County must select the county planning target; then the population planning targets for each city or town, and unincorporated areas. Once the population is allocated the projections are used by each jurisdiction as part of the GMA comprehensive planning update and in conjunction with the Land Capacity Analysis.

- **Land Capacity Analysis**

The purpose of the Land Capacity Analysis is to determine how much land, if any, is needed beyond the incorporated limits of each city and town to accommodate the urban growth and development that is projected to occur during the 20-year planning horizon. It begins with determining the existing supply of existing vacant and partially vacant lands zoned for future development that can accommodate additional growth. In evaluating the quantity of land necessary for urban growth, the following analytical process should be followed:

1. Determine how much housing is necessary for 20 years of growth.

Subtract the City's current year population from the projected 20 year population figure to determine the additional number that represents 20 years of growth. Based on a city's average household size, calculate the number of additional dwelling units to allow for.

2. Determine the necessary residential acreage.

Determine the desired and appropriate housing densities in collaboration with the cities. Calculate how many acres are needed to accommodate the number of new dwelling units based on the desired and appropriate densities. A percentage can be added to allow for market choice and location preference.

3. Determine the necessary commercial and retail acreage.

Divide the existing commercial and retail acreage by the current population to arrive at a commercial/retail acreage per capita figure. Multiply this per capita number by the additional population identified in Step #1. This will give you the amount of additional commercial/retail acreage needed. A percentage can be added to allow for market choice and location preference.

4. Determine the net amount of total additional acreage needed for non-industrial uses.

Determine the currently available undeveloped acreage within the existing UGA for both residential and commercial/retail. Subtract these figures from the acreage identified in Steps #2 and #3 to determine if acreage is needed for UGA expansion for residential or commercial/retail. Factor in additional acreage needed for open space, critical areas, parks, and other public facilities such as schools and libraries based on appropriate level of service standards. Add appropriate acreage to allow for streets.

5. Identify areas needed for Industrial zoning.

Industrial zoning is based on the city's economic development strategy and is not contingent on future population.

**6. Identify areas that are desired and appropriate for expansion.**

Identify the areas desired for UGA expansion based on the amount of acreage needed as identified in Steps #4 and #5. Ensure the requisite acreage is accurately allocated to residential, commercial/retail, and industrial. Areas desired for expansion should avoid Agricultural and Mineral Resource areas if possible. If Resource areas are unavoidable, justification for encroaching into the Resource area will be required.

**7. Capital Facilities Plan.**

Approval of any UGA expansion by Yakima County will be subject to adoption of an adequate and appropriate Capital Facilities Plan by the respective elected legislative body to ensure necessary facilities and services will be provided to the entire expanded UGA within the 20 year period. All capital and public facilities needed for future growth must be included in the Capital Facilities Plan. These needed facilities may be identified in comprehensive plan elements, in the jurisdiction's functional plans, or in the plans of other entities that provide services or facilities.

**• Mapping Criteria for New UGA areas:**

1. Lands contiguous with other properties that are, or should be, included in an urban growth area.
2. Lands that take advantage of physical features to help provide a clear separation between urban and rural areas. No physical barriers (e.g., rivers, railroads, irrigation ditches, freeways) are present that would make the area difficult to serve at an adopted level of service standard.
3. The County and the respective city or town have mutually determined that urban services will be present within the 20-year time frame of the plan, as illustrated within the city's capital facilities plan.
4. Lands with ready access to urban services (e.g., major roads, schools, public safety, water or sewer utilities), or lands needed to achieve local economic development goals / plan policies and where there is a plan and financial strategy for putting these services in place in accordance with the jurisdiction's comprehensive, subarea or neighborhood plan.
5. Lands needed for public capital facilities and utilities.
6. Lands that do not have long term commercial significance for commercial agricultural or mineral production and should be able to develop without having a detrimental effect on nearby resource lands outside the Urban Growth Area; or, lands needed for urban growth and it has been conclusively demonstrated that significantly better alternatives to the development of productive resource lands are not available.

#### **5.8.3.2 Urban Land Use Categories**

The Urban land use categories for the unincorporated UGAs are determined in a coordinated process between the County and each of the fourteen cities and towns during the Growth

## **Horizon 2040**

### *Land Use Element*

---

Management Act (GMA) mandated Urban Growth Area and/or Comprehensive Plan update. The County's Urban land use categories or designations are categorized into six general land use categories that are intended to be consistent with the plan designations found in the respective city's comprehensive, subarea or neighborhood plan. Criteria have been developed and used to map the various land use categories. Each land use category is prefaced by Purpose and General Description Statements to help interpret **Horizon 2040**. Lands meeting a predominance of criteria from one category are generally placed into a specific land use category. Future changes in land use categories will be measured against the Purpose Statements, General Map Descriptions and Mapping Criteria, in concert with Plan Element Policies.

- **Urban Residential**

#### **Purpose**

The intent of the Urban Residential land use category, adopted as part of the future land use map, is to provide for a full range of urban housing types, from single and multi - family development to high density family housing. The Urban Residential land use designation is a general designation intended to accommodate all the urban residential land use designations listed in each of the fourteen cities' and towns' future land use maps.

- **Urban Commercial**

#### **Purpose**

The intent of the Urban Commercial land use category, adopted as part of the future land use map, is to provide for commercial areas where a wide range of retail activities and services are permitted. The Urban Commercial land use designation is a general designation intended to accommodate all the urban commercial land use designations listed in each of the fourteen cities' and towns' future land use maps.

- **Urban Industrial**

#### **Purpose**

The intent of the Urban Industrial land use category, adopted as part of the future land use map, is to provide for adequate and appropriate lands for the location of industrial land uses taking into consideration compatibility with adjacent land uses, availability of required infrastructure, accessibility of adequate transportation corridors and minimization of impacts to natural resources and critical areas. The Urban Industrial land use designation is a general designation intended to accommodate all the urban industrial land use designations listed in each of the fourteen cities' and towns' future land use maps.

- **Urban Public**

**Purpose**

The intent of the Urban Public land use category, adopted as part of the future land use map, is to provide for adequate land for land uses that include, but not limited to, government buildings and service centers, public parks and recreational spaces, educational institutions, libraries, cemeteries, museums and churches. The Urban Public land use designation is a general designation intended to accommodate all the urban public land use designations listed in each of the fourteen cities' and towns' future land use maps.

- **Urban Parks and Open Space**

**Purpose**

The intent of the Parks and Open Space land use category, adopted as part of the future land use map, is to provide adequate land for land uses that include, but not limited to, public parks and recreational spaces, environmentally constrained areas and shoreline areas. The Urban Parks and Open Space land use designation is a general designation intended to accommodate all the urban public land use designations listed in each of the fourteen cities' and towns' future land use maps.

- **Urban Tribal**

**Purpose**

The intent of the Urban Tribal land use category, adopted as part of the future land use map, is to recognize lands within UGAs that are held in trust for, or owned by, the Yakama Nation. Yakima County has no jurisdiction to regulate land uses on these lands. However, the Urban Tribal land use designation is a general designation intended to accommodate all the urban tribal land use designations adopted in the future land use maps of the Yakima Nation, cities, and towns located within the Yakima Nation Reservation.

## 5.8.4 Urban Lands – Existing Conditions

### 5.8.4.1 Character of the Urban Growth Areas

At one time, most of the land in Yakima County's UGAs was used for agriculture. Irrigated agriculture brought settlers to the Yakima Valley. Railroads provided transportation for crops and goods, and the cities developed to serve the agricultural areas along the rail lines. Consequently, urban expansion has occurred, and is still occurring, on the lands early settlers found most desirable for agriculture. Generally, these are the areas with the deepest and best soils and where existing irrigation systems can carry water from great distances without the need for extensive pumping.

Maps 5.8.4.1-1 through 5.8.4.1-15 show the location of Yakima County's fourteen cities and UGAs. These areas take in most of the County's population, as well as the major commercial and employment centers. While each city and UGA share some common features, each one has a

## Horizon 2040

### Land Use Element

---

very separate and distinct character. They range in size from tiny Harrah (OFM 2015 population of 650) to the county seat in Yakima (OFM 2015 population of 93,220). Some unincorporated UGAs are more residential in nature, while some are more industrial and commercial based. One common characteristic that all cities and UGAs in Yakima County share is that each have large agricultural economies.

Table 5.8.4.1-1 lists the estimated population for each city and its associated UGA according to the Washington State Office of Financial Management (OFM). The population listed represents population in both the unincorporated and incorporated areas of the UGA. The pattern illustrated in Table shows steady population growth within each of the fourteen urban growth areas. This is to be expected considering the vast majority of development occurs in UGAs and Yakima County is a GMA compliant county with adopted comprehensive plans and development regulations guiding growth inside UGAs.

Source: Office of Financial Management (OFM)

OFM does not estimate population for the unincorporated areas of the UGA, however when the population estimates in Table 5.8.4.1-1 above are subtracted from the standard April 1<sup>st</sup> OFM city population estimates between 2010-2015, the results are population estimates for the unincorporated portions of the UGA, see Table 5.8.4.1-2 below.

Urban growth areas by their design are intended to be evolving from year to year with population fluctuations from annexations and/or UGA boundary changes. The unincorporated UGA population listed in the Table below is useful for planning purposes. For example, identified trends in a city's UGA population can be compared to that city's incorporated population growth over the same time period and an analysis could be done to determine whether population growth is from new development or annexations. The data is also be a great indicator of how cities and the county are meeting their own comprehensive plan density goals.

Source: Yakima County and Office of Financial Management (OFM) UGA Data

During the original Visioning process conducted for the Yakima County comprehensive plan, a citizen preference for population distribution throughout the County was identified. The distribution was 75 percent of the total population will be living in the cities or their surrounding UGA, while the remaining 25 percent of the total will locate in the rural and resource lands. Based on the 2015 OFM population estimates for Yakima County, the UGAs and the incorporated cities and towns in the County the overall population distribution between urban and rural population is on target with the original vision (see Table 5.8.4.1-3 below).

**Table 5.8.4.1-3 OFM 2015 Population Distribution of Yakima County (Urban vs. Rural)**

	2015 OFM Population Estimate	2015 OFM Urban Vs. Rural Population Estimates	Population Distribution (Urban/Rural)
<b>Yakima County Total Population</b>	249,970	249,970	100%
<b>Unincorporated Population</b>	85,985	63,747 (Total Unincorporated Pop of 85,985 minus Total UGA Pop of 22,238)	26%
<b>Incorporated Population</b>	163,985	186,223 (Total Incorporated Pop of 163,985 plus Total Unincorporated UGA Pop of 22,238)	74%

#### 5.8.4.2 – Urban Growth Areas - Annexations

Consistent with this goal of controlling the spread of urban growth, the GMA limits the territory that a city may annex to that which lies within its UGA. The annexation issue facing cities in GMA counties will not be so much whether to annex as when to annex. Ultimately, a city will annex to the limits of its UGA, assuming that the population projections prove accurate. The timing of that

## Horizon 2040

### Land Use Element

---

expansion will depend on a number of factors, including population growth within the urban growth area and the city's ability to provide urban-type services in that area.

Annexations play an important role in the population changes of both the unincorporated and incorporated areas of an UGA. Almost overnight, an annexation can result in a significant increase in population for a city while conversely decreasing a County's population. Table 5.8.4.1-3 shows that over a ten year period between 1990 and 2000 almost 11,000 unincorporated County residents were annexed into a city. The Table shows that the bulk of that population went into the cities of Union Gap and Yakima.

**Table 5.8.4.1-3 Annexations by Jurisdiction From 1990 - 2000**

Jurisdiction	Annexation Parcels	Annexation Area (sq mi)	Annexation Housing Units	Annexation Occupied Housing Units	Annexation Population

<b>Zillah</b>	4	0.071	24	23	56

Source: Office of Financial Management (OFM)

Though Table 5.8.4.1-5 only shows the annexations by jurisdiction over a five-year period. Compared to the two Tables above that are for a ten year period, it clearly illustrates a dramatic decline in the number of annexations in Yakima County. If the 2010 to 2015 five year trend continues out to 2020 there will be less than 900 people annexed into cities. That is roughly 10,000 people less than what occurred during each of the two previous decades. Of course all that could change with one large annexation, which is precisely why Yakima County relies on land capacity along with population projections to accurately identify future urban land needs.

### **5.8.5 Urban Land Lands – Future Land Use Needs**

To ensure Yakima County has not restricted the supply of urban land through its population allocations, the OFM 2040 medium projection of 318,494 is used throughout the entire Land Use Element to calculate the adequacy of the available land supply. If recent trends continue, approximately 63 percent of this figure, or 200,511 people, will be living in the cities or towns by the year 2040. Based on these same trends, approximately 11 percent of the population in the year 2040, or 38,359 people, will be living within the unincorporated UGAs. If these figures hold, the total urban population in 2040 will equal 238,870. Once the population has been projected the Growth Management Act requires Yakima County to determine the necessary amount of land needed for future growth. The Land Capacity Analysis (LCA), is the tool for which Yakima County sizes UGA boundaries.

#### **5.8.5.1 Countywide Urban Growth Area Land Capacity Analysis**

The Land Capacity Analysis (LCA), as outlined in subsection 5.8.3.1 above, is a quantitative estimate of how much vacant land (i.e., land available for future urban development) a city (and unincorporated UGA) currently has and will require as it grows over the succeeding 20-year period. It begins with consultation between Yakima County and each of its cities and towns to select a population growth projection from a range of population growth projections provided by OFM. The population projection, together with a county employment growth forecast, is then allocated primarily to UGAs, to assist in sizing UGAs to accommodate future urban growth. The LCA quantifies the amount of vacant land needed for each city and town's growth then compares those results to the amount of vacant land currently within the UGA. This will determine if there is a surplus or a deficit of vacant land for future growth to year 2040. A more detailed description of the LCA is outlined in the example below:

- Quantity of Land Calculations for Non-Industrial Uses
  1. Population and Households Analysis: Using a city's projected 2015-2040 population growth, this analysis estimates the number of additional households that will be added to the city's population by the year 2040. An example city is described below:

2040 population forecast for city (County Planning)	Example 1000 people
2015 population in city (OFM's April 1 estimate)	Example 500 people
Population increase in city 2015-2040	Example 500 people
<u>Average household size in city (2010 Census)</u>	<u>Example 2.87 people</u>
Additional households in city 2015-2040 ( $500 \div 2.87$ )	Example 174 households
  2. Future Residential Land Need: The acreage needed for future residential growth through 2040 is calculated by assuming an average future density of 8,500 sq. ft. of land for each household (i.e., 5.1 dwelling units per acre) and multiplying this amount by the number of projected new future households:

$$8,500 \text{ sq. ft.} \times 174 \text{ households} = 1,479,000 \text{ sq. ft.} / 43,560 \text{ sq. ft. (1 acre)} = 34 \text{ acres}$$

3. Future Commercial & Retail Land Need: The acreage needed for future commercial and retail growth through 2040 is calculated by multiplying the projected population increase by the current per capita acreage of developed commercially-zoned lands within the city after subtracting the acreage classified for community facilities (as determined by GIS analysis):

$$500 \text{ people} \times 0.0169 \text{ acres per capita} = 8 \text{ Acres}$$

4. Future Community Facilities Land Need: The acreage needed for future community facilities growth through 2040 is calculated by multiplying the projected population increase by the current per capita acreage of developed community facilities land within the city (as determined by GIS analysis):

$$500 \text{ people} \times 0.0494 \text{ acres per capita} = 25 \text{ Acres}$$

5. Future Streets Land Need: The acreage needed for future rights-of-way to accommodate streets and utilities through 2040 is calculated by multiplying the acreage needed for future residential, commercial & retail, and community facilities by 15%:

Residential acreage needed	34 Acres +	5.1 Acres for streets
+ Commercial/retail acreage needed	8 Acres +	1.2 Acres for streets
+ Community facilities acreage needed	<u>25 Acres +</u>	<u>3.75 Acres for streets</u>
= Subtotal of total streets acreage	(67 Acres x 0.15) = 10.05 Acres	for streets

6. Land Capacity Analysis for Non-Industrial Uses: Next, the needs for land identified above are compared with the amount of existing vacant land to determine if there is currently a surplus or a deficit of vacant land within the City and the UGA to accommodate projected growth through 2040.

Total amount of vacant land needed in UGA for future growth (excluding industrial growth): Adding the needed acres from the categories above results (including streets) in the total acreage calculated below:

Acres needed for future residential uses	39.1 Acres
+Acres needed for future commercial & retail uses	9.2 Acres
+Acres needed for future community facilities	<u>28.75 Acres</u>
=Total vacant acres needed for future non-industrial uses	77.05 Acres

7. Current Vacant Land Analysis:

Yakima County's Division of Geographic Information Services (GIS) determines the current acreage of developed residential, commercial & retail, and community facilities. GIS also determines the acreage of current vacant land and partially vacant land in each zoning district. In this example city, summaries of whether each zoning

group has a surplus or a deficit of vacant land to accommodate the projected growth through 2040 are listed in Table below:

<b>Table 5.8.5.1-1 Example Land Capacity Analyses (LCA) Summary – Excluding Industrially-zoned Land</b>					
<b>Zoning Group</b>	<b>Total Acres Within City Limits</b>	<b>Outside City Limits &amp; Within Current UGA</b>	<b>Total: Within City Limits and Within Current UGA</b>	<b>Total Acres needed from Step 6 above</b>	<b>Determination of Surplus or Deficit</b>
<b>Residential</b>	Vacant: 13 acres	Vacant: 51 acres	Vacant: 64 Acres	39.1 acres	<i>Surplus: 24.9 acres</i>
<b>Commercial</b>	Vacant: 18 acres	Vacant: 34 acres	Vacant: 52 Acres	9.2 acres	<i>Surplus: 42.8 acres</i>
<b>Community Facilities</b>	Vacant: 0 acres	Vacant: 0 acres	Vacant: 0 Acres	28.75 acres	<i>Deficit: 28.75 acres</i>
<b>Total of above Zoning Groups</b>	Vacant: 31 acres	Vacant: 85 acres	Vacant: 116 Acres	77.05 acres	<i>Surplus: 38.95 acres</i>

Based on the example shown in the Table above, there is roughly a total of 116 vacant acres inside the UGA and based on the LCA in steps 1 through 6 the example city needed roughly 77.05 acres for next twenty plus years of growth, which means there is a surplus of 38.95 acres available in the current UGA to accommodate growth through 2040.

8. Computed Market Choice Factor (MCF) and “Years of Growth” (excluding Industrial growth):

One way of quantifying the surplus (or deficit) of vacant land in a city and within its UGA is to express the surplus (or deficit) as a percentage of the amount of vacant land that is needed for growth over the 25-year period from 2015 to 2040. In our example above, the city has 116 vacant acres and needs 77.05 vacant acres for future growth, it has 51% more vacant land than needed for growth. So the Computed MCF is 51%, as calculated below:

$$[(\text{acres currently vacant}) \div (\text{acres needed for future growth})] - 1.00 = \text{Computed MCF \%}$$

Example:  $[116 \text{ acres} \div 77.05 \text{ acres}] - 1.00 = 0.51 = 51\%$

The example city has a 51% MCF, which means that there is 51% more vacant land than needed for growth over the twenty-five year period from 2015 to 2040. In Yakima County, the MCF is set by policy within **Horizon 2040** at 10%. An additional way of quantifying the surplus (or deficit) of vacant land available for future growth is to express the surplus (or deficit) as the number of years it would take to develop all the vacant land at the projected future growth rate. The calculation below outlines how to determine the years of growth for our example city.

$$(\text{Computed MCF} + 1) \times 25 \text{ years} = \text{years of growth available}$$

$$\text{Example 1: } (51\% \text{ MCF} + 1) \times 25 \text{ years} = 37.75 \text{ years of growth available}$$

<b>Table 5.8.5.1-2 Example MCF and Years of Growth</b>	
	<b>Within the Current UGA</b>
	Vacant: 116 acres
<b>Market Choice Factor</b>	51%
<b>Years of Growth</b>	37.75 years

The figures for both the “MCF” and “years of growth” metrics for the example city show that the MCF of 51% exceeds the plan policy standard of 10% and the years of growth of 37.75 also exceed the GMA mandate of twenty years. Thus, the example city does not need to have its UGA boundary expanded and more importantly, the current UGA appears large enough to accommodate the next twenty plus years of growth.

#### 9. Future Industrial Land Needs:

As provided by the analytical process outlined in the “Urban Lands” section in the Land Use Element of Yakima County’s Comprehensive Plan - **Horizon 2040** the amount of land needed for future industrial uses “is based on the city’s economic development strategy and is not contingent on future population.”

#### 5.8.5.2 Countywide Urban Growth Area Land Capacity Analysis Results

The Growth Management Act (GMA) requires Yakima County to review the UGAs of each of the County’s fourteen cities and towns as part of the 2017 period comprehensive plan update. GMA requires this update once every eight years. In coordination with those cities and towns, the County conducted a Land Capacity Analysis (LCA) to determine the amount of urban lands needed for twenty years of growth. The land needed to accommodate that growth is broken down into four categories: Residential, Commercial/Retail, Community Facilities and Streets. The estimated amount of land needed to accommodate future growth is outlined in Table 5.8.5.2-1 below.

**Table 5.8.5.2-1 Land Capacity Analysis (LCA) – Land Needed For Future Growth**

Yakima Cities	Projected Pop Increase From 2015-2040	Person Per Household (Census)	Number Households needed	Land Needed For Residential (Acres)	Land Needed For Commercial & Retail (Acres)	Land Needed For Community Facilities (Acres)	Land Needed For Streets (Acres)
